TERMOIZOLACIJA/ THERMAL INSULATION

Katalog 2025 / Catalog 2025

Katalog

Catalog

Dobrodošli / Welcome

2025

Osnovni cilj ovog kataloga bio je detaljno predstaviti sve termoizolacijske proizvode, kao i proizvodne mogućnosti naše tvrtke. Kroz sve ove godine poslovanja, uvijek smo se trudili pratiti tržišne trendove ulaganjem u nove strojeve i proizvodna znanja. Izdavanjem ovog kataloga, naši klijenti prvi put na jednom mjestu imaju navedene sve proizvode s nizom korisnih informacija poput njihove uporabe i temperaturne izdržljivosti, te fizikalnih i kemijskih svojstava. Vjerujemo kako će ovaj uloženi trud, uz zadržavanje postojećih kupaca i partnera, rezultirati i privlačenjem novih!

The main goal of this catalogue was to provide a detailed presentation of all our thermal insulation products, as well as the production capabilities of our company. Over the years of our business, we have always strived to keep up with market trends by investing in new machinery and production knowledge. With the release of this catalogue, our clients now have, for the first time, all our products listed in one place, along with a range of useful information such as their application, temperature resistance, physical and chemical properties. We believe that this effort, along with retaining existing customers and partners, will also result in attracting new ones!

BIPAS-SISTEM

Povijest

History

Tvrtka BIPAS – SISTEM d.o.o. osnovana je u Metkoviću, na samom jugu Hrvatske, 1998. godine. Znanje stečeno u velikim grupacijama i tvrtkama grupa entuzijasta pretočila je u novo poduzeće koje je vrlo brzo steklo reputaciju pouzdanog suradnika.

Zahvaljujući posjedovanju i konstantnom širenju stručnog znanja na području proizvodnje brtvenih i izolacijskih proizvoda, te ulaganjem u edukaciju zaposlenika i usvajanju novih tehnologija tvrtka se vrlo brzo pozicionirala na tržištu s tradicijom posovanja gotovo već 25 godina.

The company BIPAS – SISTEM d.o.o. was founded in Metković, in the south of Croatia, in 1998. The knowledge acquired in great conglomerates and companies was transferred by a group of enthusiasts into a new company which quickly gained a reputation of a reliable partner.

Due to owning and constantly expanding our expertise in sealing and isolation products, and by investing into education of our employees, our company very quickly positioned itself into the market with the business tradition of almost 25 years.

Temeljne djelatnosti

Main activities

Brtvlenje

Dugogodišnjom suradnjom i stvaranjem partnerskog odnosa sa stalnim klijentima stečena su znanja za rješavanje najzahtjevnijih problema brtvlenja. Mogućnost izrade najsloženijih oblika brtvila za statičko ili dinamičko okruženje, prilagodba pojedinačnim specifičnim slučajevima su naše posebnosti.

Sealing

By long-standing collaboration and creation of partnership with our regular clients, we gained knowledge necessary for solving the most challenging sealing problems. We specialize in creating the most complex forms of seals for static or dynamic setting in addition to adaptation to individual specific situations.

Termoizolacija

Zaštita strojnih komponenti ili dijelova industrijskih postrojenja od visokih temperatura ili direktnih plamenih udara uža su specijalnost tvrtke BIPAS – SISTEM od njenog začetka. U našem assortimanu nalazi se čitav niz proizvoda od staklenih i keramičkih vlakana namjenjenih za zaštitu i izolaciju do 550 °C odnosno 1100 °C.

Thermal insulation

The protection of machine components or parts of industrial plants from high temperatures or direct flame are a sub-specialty of the BIPAS – SISTEM company from its beginnings. We offer a variety of products made of glass and ceramic fibres intended for protection and isolation of up to 550°C or 1100°C.

Industrijski platnenikompenzatori

Iskustvo i znanje naših stručnjaka koje se stjecalo desetljećima u problematici konstruiranja i proizvodnje industrijskih kompenzatora jedan je od glavnih razloga zašto nam se klijenti obraćaju s potpunim povjerenjem.

Industrial fabric expansion joints

The experience and knowledge of our experts which has been acquired for decades in the areas of construction and production of industrial expansion joints are only some of the reasons why clients approach us with complete confidence.

Klizni ležajevi osovinskih vodova plovila - METAFLON ležajevi

Slide bearings of marine shafts - METAFLON bearings

Expansion of product range and knowledge acquisition for the purposes of readily facing everyday challenges of the market brought us to the production of slide bearings of marine shafts. These products were formerly known as METAFLON on the Croatian market since they were produced by METAFLON d.o.o. company from Ploče. BIPAS - SISTEM company as the successor of the formerly mentioned company has been active on the market since 2010.

Proizvodi od teflona i drugih vrsta tehničke plastike

Products made of Teflon and other types of engineering plastics

Rich supplies of semi-manufactured goods made from different types of engineering plastics, among which we emphasize Teflon, provided our company with necessary range of products in areas of sealing and general industry.

An extrusion machine, a press, a particle removal device and a sintering furnace make us fully equipped and ready to answer numerous requests in case we need to create semi-manufactured or final products with presentation of technical documentation.

Slika 5. Staklene pletenice/ Glass fiber braids

O proizvodima About products

Proizvodi od E-stakla većinom se proizvode od prediva poprečnog presjeka 6-9 µm, koje je prethodno prošlo proces teksturizacije, volumizacije i uvijanja pomoću visokotlačnog zraka. E-staklo je materijal koji je nastao kao zamjena za azbest. Oznaka "E" u imenu označava kako su proizvodi anorganski, sterilni i nezapaljivi. Temperaturno su otporni do 550 °C, te su otporni na ulja, otapala i brojne kemikalije. Imaju izuzetno nisku toplinsku provodljivost i pokazuju dobru otpornost na vibracije i na habanje.

Upotreba:

Peći, ložišta, kotlovi, dimnjaci, dimovodi, toplinska zaštita, zaštita električnih kablova, izolacija ispušnih cijevi, otvor ložišta i dimnjaka, upotreba u proizvodnji platnenih kompenzatora i slično.

Products made of E-glass are mostly produced from yarn with a cross-sectional diameter of 6-9 µm, which has undergone prior processes of texturization, volumization, and twisting using high-pressure air. E-glass is a material that emerged as a substitute for asbestos. The designation "E" in its name signifies that the products are inorganic, sterile, and non-flammable. They are temperature resistant up to 550 °C, resistant to oils, solvents and various chemicals. Additionally, they exhibit extremely low thermal conductivity and good resistance to vibrations and wear.

Usage:

Furnaces, hearths, boilers, chimneys, flue pipes, thermal insulation, protection of electrical cables, insulation of exhaust pipes, openings of hearths and chimneys, use in the production of fabric compensators etc.

Jastuci Pillows

Termoizolacijski jastuci su proizvod namijenjen izolaciji metalnih cijevi ili strojnih dijelova kroz koje prolazi medij visoke temperature. Postavljanjem jastuka smanjuje se isijavanje topline u okolinu, potencijalno zapaljenje nečega u blizini i onemogućuje se izravan ljudski dodir vruće cijevi ili strojnog dijela. Isto tako, smanjuje se utjecaj okoline na cijev ili strojni dio čime se uvelike produljuje njihov vijek trajanja.

Thermal insulation pillows are a product intended for the insulation of metal pipes or machine parts through which a medium of high temperature passes. Placing a pillow reduces heat radiation to the environment, potential ignition of something nearby, and prevents direct human contact with a hot pipe or machine part. Likewise, the influence of the environment on the pipe or machine part is reduced, which greatly extends their service life.

O proizvodima

About products

Proizvodi čiji je osnovni materijal keramičko vlakno debeline 3 – 4.5 µm. Koriste se predvi različite čvrstoće, odnosno broja texa keramičkih vlakana (750 tex – 2000 tex), kao i različite vrste punila prediva. Tako kao punilo može poslužiti stakleno vlakno koje u kombinaciji s keramičkim vlaknima daje temperaturnu otpornost do 650°C. U slučaju da je unutar punila od staklenih vlakana integrirana još i Inconel žica, postiže se temperaturna otpornost i do 1100°C.

Upotreba:

Peći, ložišta, kotlovi, dimnjaci, dimovodi, toplinska zaštita, zaštita električnih kablova, izolacija ispušnih cijevi, otvori ložišta i dimnjaka, upotreba u proizvodnji platnenih kompenzatora, izvrsna zaštita od gorenja prilikom zavarivanja i slične upotrebe

Products whose main material is ceramic fiber with a thickness of 3 – 4.5 µm. Yarns of various strengths or tex numbers of ceramic fibers (750 tex – 2000 tex) are used, as well as various types of yarn fillers. Thus, glass fiber which in combination with ceramic fibers provides temperature resistance up to 650°C can serve as a filler. In the case where Inconel wire is integrated within the glass fiber filler, temperature resistance of up to 1100°C. can be achieved.

Usage:

Furnaces, hearths, boilers, chimneys, flue ducts, thermal insulation, protection of electrical cables, insulation of exhaust pipes, openings of furnaces and chimneys, use in the production of fabric compensators; excellent protection against burning during welding and similar applications

O proizvodima

About products

Materijal koji se sastoji od posebnih termički tretiranih staklenih vlakana s visokim udjelom kalcijevih i silikatnih oksida. Predivo kao sirovina za proizvodnju može doći ojačano staklenim vlaknima čime se pruža temperaturna otpornost do 650 °C ili može biti ojačano Inconel žicom čime se pruža otpornost i do 1050 °C. Posebnosti ovog materijala su dobra mehanička svojstva, izvrsna temperaturna postojanost te fleksibilnost i mekoća na dodir. Ekološki prihvativljiv materijal nastao kao alternativa keramičkim vlaknima..

Upotreba:

Peći, ložišta, kotlovi, dimnjaci, dimovodi, toplinska zaštita, zaštita električnih kablova, izolacija ispušnih cijevi, otvor ložišta i dimnjaka, upotreba u proizvodnji platnenih kompenzatora i slično

The material consists of specially thermally treated glass fibers with a high content of calcium and silicate oxides. The yarn, as a raw material for production, can be reinforced with glass fibers, providing it with temperature resistance up to 650 °C, or it can be reinforced with Inconel wire, providing resistance up to 1050 °C. The characteristics of this material include good mechanical properties, excellent thermal stability, as well as flexibility and softness to the touch. An environmentally friendly material emerged as an alternative to ceramic fibers.

Usage:

Furnaces, hearths, boilers, chimneys, flue ducts, thermal insulation, protection of electrical cables, insulation of exhaust pipes, openings of furnaces and chimneys, use in the production of fabric compensators etc.

O proizvodima

About products

Vrsta materijala čija je baza stakleno predivo koje je prošlo kroz posebni toplinski i kemijski proces čime se postiže bolja mehanička svojstva u odnosu na obično stakleno predivo kao i veća toplinska izdržljivost koja ide i do 700°C. U slučaju da se navedeno predivo dodatno armira Inconel žicom postiže se superiorna svojstva u odnosu na ostale materijale.

Upotreba:
Peći, ložišta, kotlovi, dimnjaci, dimovodi, toplinska zaštita, zaštita električnih kablova, izolacija ispušnih cijevi, otvor i ložišta i dimnjaka, upotreba u proizvodnji platnenih kompenzatora i slično

A type of material whose base is glass yarn that has undergone a special thermal and chemical process, resulting in improved mechanical properties compared to regular glass yarn, as well as higher thermal resistance reaching up to 700°C. In the case of additional reinforcement with Inconel wire, superior properties are achieved compared to other materials.

Usage:
Furnaces, hearths, boilers, chimneys, flue pipes, thermal insulation, protection of electrical cables, insulation of exhaust pipes, openings of hearths and chimneys, use in the production of fabric compensators etc.

Proizvodi od bazaltnih vlakana

Products made of basalt
fibers

Šifra/ Code
IZOBSFVL BS 700

700 °C

Slika 45. Pletenica od bazaltnih vlakana/ Rope made of basalt fibers

O proizvodima About products

Vrsta materijala koja se nalazi u vulkanskim stjenama. Pruža izvrsnu termičku i zvučnu izolacijsku otpornost i do 700°C. Materijal koji se ističe po mehaničkim svojstvima i kemijskoj postojanosti u svim okolinama. Bazaltna vlakna su neorganska, sterilna, nezapaljiva i ne sadrže toksične elemente te su potpuno sigurna za upotrebu. Predivo se sastoji od niti koja prolaze kroz proces teksturizacije i volumizacije te kroz proces uvijanja što u konačnici dovodi do lakšeg prediva veće fleksibilnosti.

Upotreba:
Peći, ložišta, kotlovi, dimnjaci, dimovodi, toplinska zaštita, zaštita električnih kablova, izolacija ispušnih cijevi, otvor ložišta i dimnjaka, upotreba u proizvodnji platnenih kompenzatora i slično.

Type of material found in volcanic rocks. It provides excellent thermal and sound insulation resistance up to 700°C. A material distinguished by its mechanical properties and chemical stability in all environments. Basalt fibers are inorganic, sterile, non-flammable and do not contain toxic elements, making them completely safe for use. The fabric consists of fibers that undergo texturization and volumization processes, followed by a twisting process, ultimately resulting in a lighter fabric with greater flexibility.

Usage:
Furnaces, hearths, boilers, chimneys, flue pipes, thermal insulation, protection of electrical cables, insulation of exhaust pipes, openings of hearths and chimneys, use in the production of fabric compensators etc.

Proizvodi od aramidnih vlakana

Products made of aramid fibers

Šifra/ Code
IZOARVL BS 350

350 °C

Slika 50. Pletenica od aramidnih vlakana / Rope made of aramid fibers

O proizvodima

About products

Proizvodi od aramidnih vlakana koriste se u uvjetima rada u kojima se zahtijeva visoka mehanička otpornost, a da radna temperatura okoline ne prelazi 350 °C. Materijal posjeduje iznenađujuće visoku otpornost na udarne opterećenja i vibracije.

Upotreba:

S obzirom na svoja izrazita mehanička svojstva, proizvodi od aramidnih vlakana najčešće se koriste kao zaštita od mehaničkih oštećenja, udara, vibracija, habanja i slično.

Products made of aramid fibers are used in working conditions that require enhanced mechanical resistance, with the ambient temperature not exceeding 350 °C. The material exhibits remarkably enhanced resistance to impact loads and vibrations.

Usage:

Given their remarkable mechanical properties, products made of aramid fibers are most commonly used as protection against mechanical damage, impacts, vibrations, abrasion etc.

BA termoizolacijske negorive ploče

BA non-combustible thermal insulation panels

Šifra/ Code
IZO BA 1000

700 °C - 1100 °C

Slika 55. Brtve napravljene od BA ploča/ Gaskets made of BA panels

O proizvodima

About products

BA termoizolacijske negorive ploče izrađene su miješanjem i prešanjem više različitih materijala, među kojima dominiraju mineralna, keramička ili bio vlakna. Ploče odlikuju izvrsnu postojanost oblika, dobra mehanička svojstva te kemijska postojanost na svim temperaturama.

Upotreba:
S obzirom da se lako režu, masovno se upotrebljavaju za izradu brtvi na mjestima gdje se traže i brtvena i termoizolacijska svojstva; materijal koji se koristi u gotovo svim industrijama.

BA non-combustible thermal insulation panels are made by mixing and pressing several various materials, among which mineral, ceramic or biofibers dominate. The panels are characterized by excellent dimensional stability, good mechanical properties, and chemical resistance at all temperatures.

Usage:
Considering they are easily cut, they are widely used for making gaskets in places where both sealing and thermal insulation properties are required; a material utilized in almost all industries.

BIPAS-SISTEM

Katalog

Od svoga osnutka tvrtka BIPAS – SISTEM, uzimajući u obzir sve mjerljive poslovne parametre, ostavila je najveći trag na području Republike Hrvatske. Budući da su se sve zemlje u okruženju u posljednjih 20 godina industrijski razvijale, javila se potreba za pronalaženjem poslovnih partnera izvan matične države. Godine 2005. u Sarajevu se osniva partnerska tvrtka BIPAS – SISTEM, koja ima za cilj pokrivanje tržišta susjedne zemlje Bosne i Hercegovine, dok se 2022. godine osniva predstavništvo u Zagrebu sa jasnom namjerom širenja poslovanja na sjeverozapadnom dijelu Hrvatske. Stjecanjem novih zadovoljnih klijenata i s apsolutnim povjerenjem u kvalitetu i pouzdanost naših proizvoda, naša je želja u budućnosti zakoračiti na zapadnoeuropska tržišta i što vjernije predstavljati našu zemlju u ovom području industrije.

Considering all the measurable business parameters, BIPAS – SISTEM company has since its beginning left the greatest mark within the Republic of Croatia. Since all the surrounding countries have been developing their industries in the last 20 years, there was a call for finding business partners outside the home country. In 2005, a partner company BIPAS – SISTEM is founded in Sarajevo which serves a purpose of meeting the needs of the neighbouring market of Bosnia and Herzegovina. In 2022, a branch office is opened in Zagreb with the clear purpose of business expansion in the north-western part of Croatia. By gaining new and satisfied clients and with the absolute confidence in the quality and reliability of our products, it is our great wish to step into the markets of Western Europe in the future to represent our country as faithfully as possible in this area of industry.

Certifikati i priznanja

Certificates and recognition

Tvrtka BIPAS – SISTEM je, prema procjeni nadležnih tijela, zadovoljila normu ISO 9001:2015, čime je stekla sve potrebne preduvjete za proizvodnju i prodaju brtveno izolacijskih materijala. Također, Hrvatski registar brodova potvrdio nas je kao proizvođača komponenti koje se ugrađuju na brodove i postrojenja pod njihovim nadzorom. Ovi certifikati, osim što nam daju zakonske okvire i dozvole za rad, dodjeljuju nam i odgovornost da sve što proizvodimo i radimo bude na takvoj razini da ne ugrožava sigurnost nikoga.

Based on the evaluation of authorities, BIPAS – SISTEM company meets the standard ISO 9001:2015 and as such has all the necessary basis for manufacturing and sale of sealing and insulation materials. In addition, Croatian Register of Shipping acknowledged us as the manufacturer of components built into ships and facilities under their supervision. Besides providing us with legal framework and work permits, these certificates also give us the responsibility of maintaining the level of all our production and work in such a way that nobody's safety is endangered.
